Thermal Packaging for Maximum Insulation

- Three layers of material provide insulation for hot and cold food products. Flex-foil metalized polyester bubble laminate is a tri-layer product consisting of a layer of metalized polyester, a single layer of 3/16" bubble and a white polyethylene backing sheet. The insulation acts as a shield against the three types of heat transfer: conduction, convection and radiant. The bubbles and polyester prevent conduction and convection heat transfer while the foil reflects the radiant heat.

- Maintains temperature ranges for hours.
- Flexible, tough and durable.
- Helps ensure product quality, taste, texture and color.
